STUDENT ACADEMIC PORTAL

Administrator Setup & User Management Manual

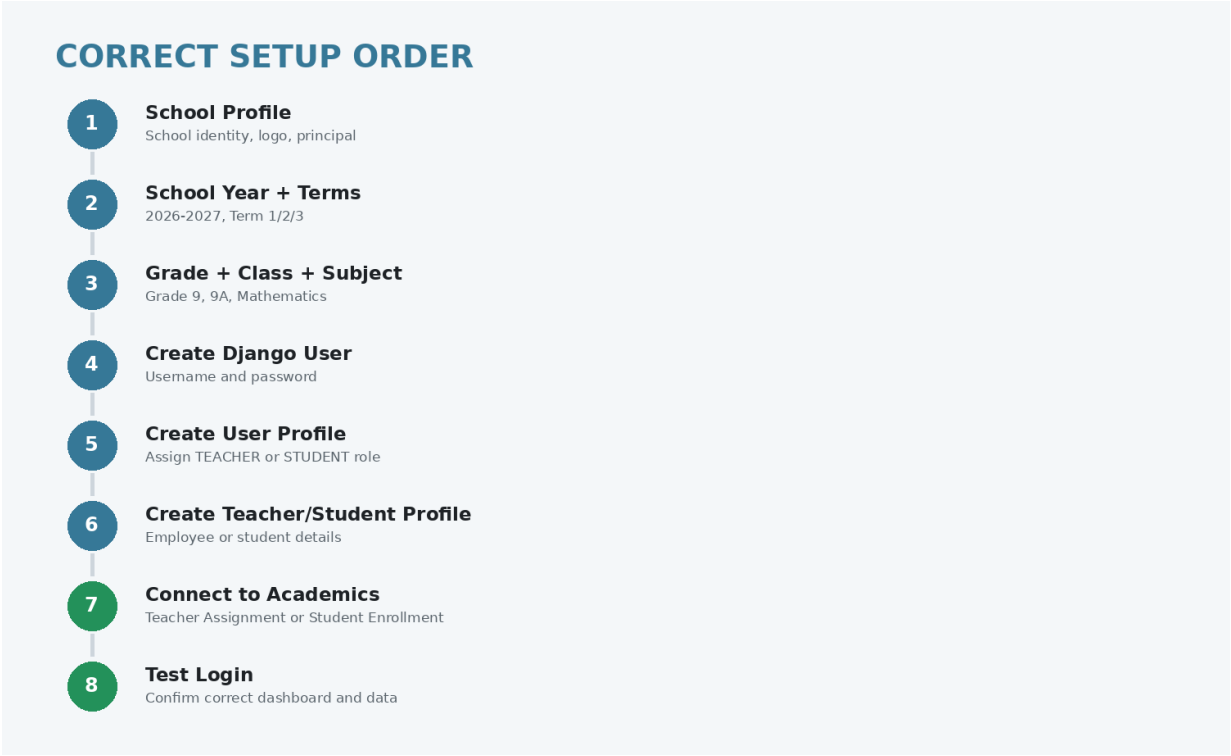

Visual step-by-step guide for setting up the school, teachers and students

Purpose: This manual shows an administrator exactly how to prepare the portal from a blank setup through a working teacher and student login.

Audience	School administrators / system administrators
Example school	Example High School
Example teacher	Daniel Morgan - T0002
Example student	Aaliyah Campbell - S0002
Example class	9A Mathematics - 2026-2027

1. Administrator Setup Overview

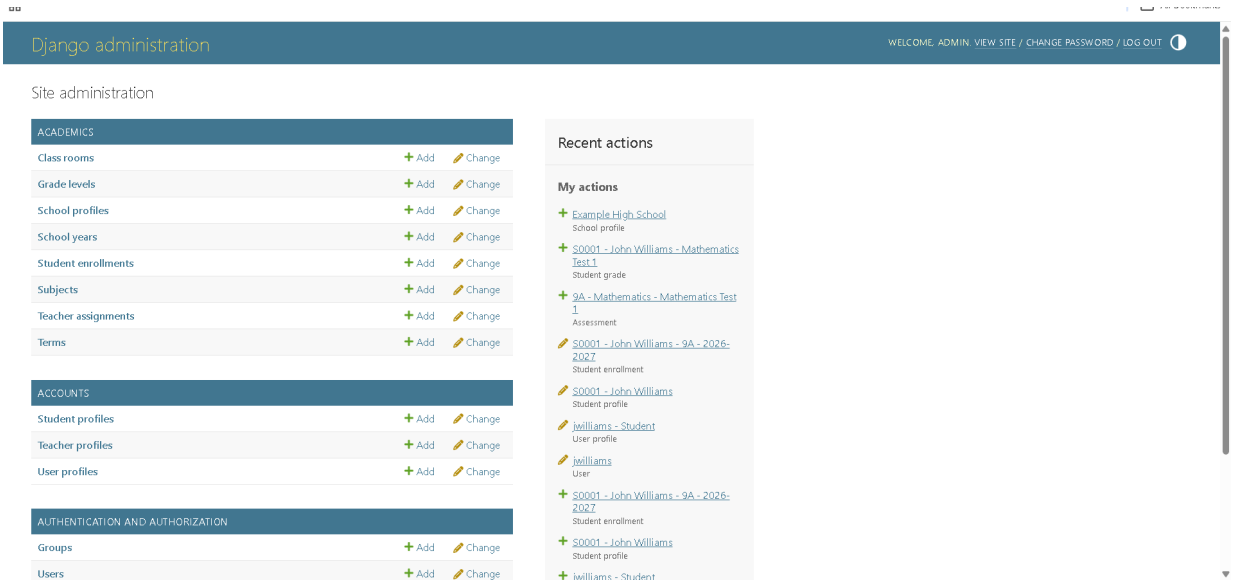

The portal uses linked records. Creating only a username is not enough. A teacher or student account becomes fully functional only after the user, role profile, personal profile and academic connection have all been created.

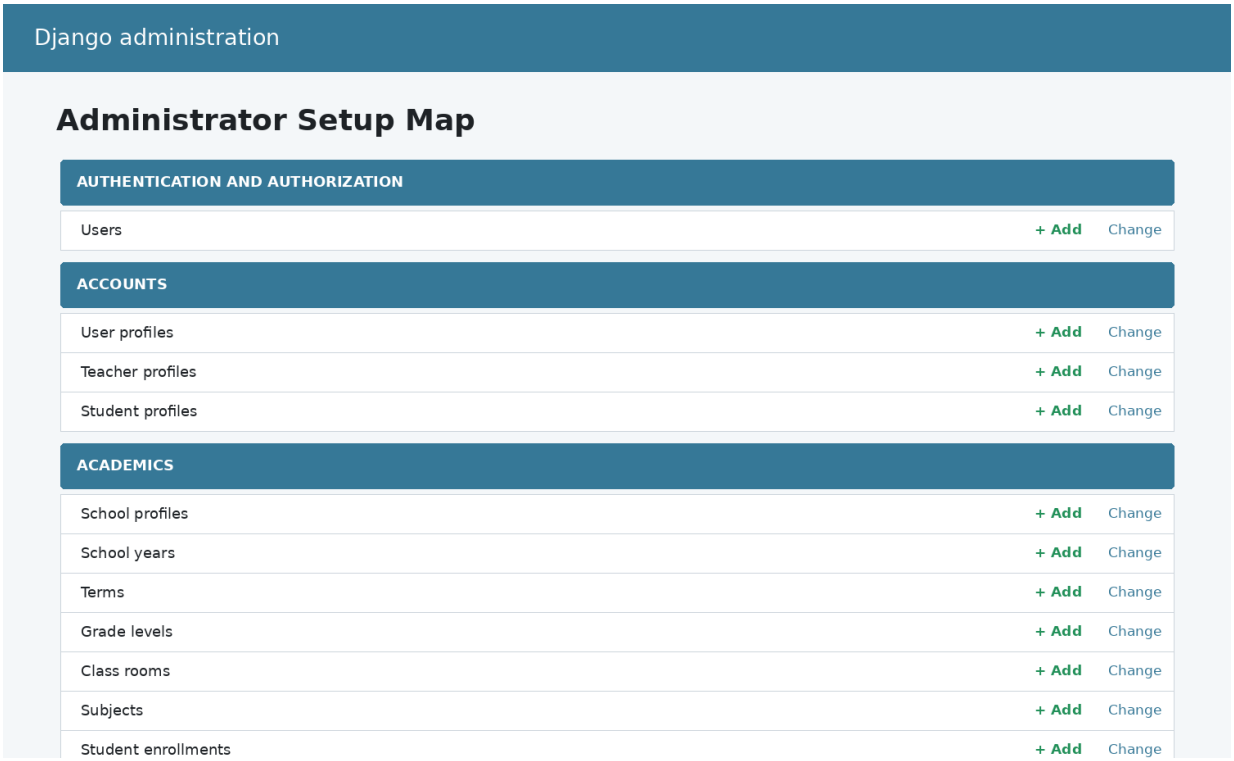

Illustrated setup order - follow this sequence to avoid missing links.

Critical rule: For a teacher: User -> User Profile (Teacher) -> Teacher Profile -> Teacher Assignment. For a student: User -> User Profile (Student) -> Student Profile -> Student Enrollment.

2. Administrator Home Screen

Real portal screenshot - Django administration home screen.

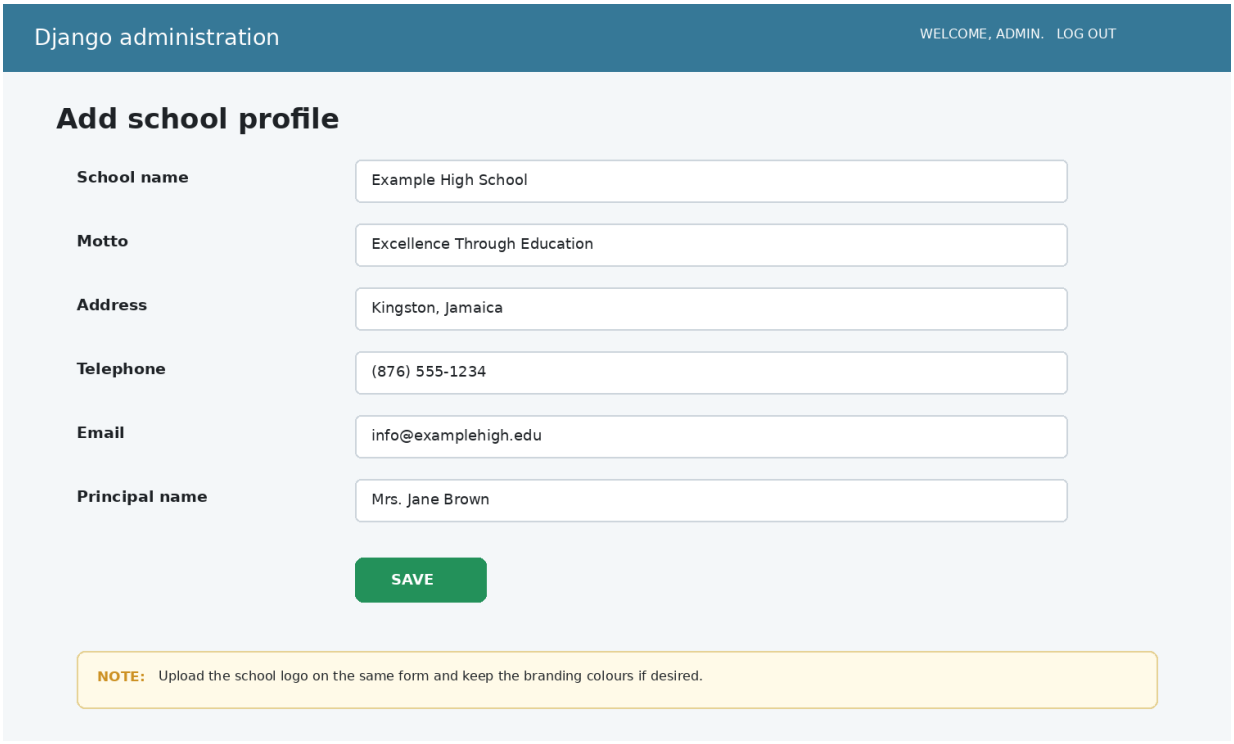

Illustrated map of the administration sections used by the portal.

Admin address: Use http://127.0.0.1:8000/admin/ while testing locally. A deployed school server will use its own domain.

3. Initial School Setup

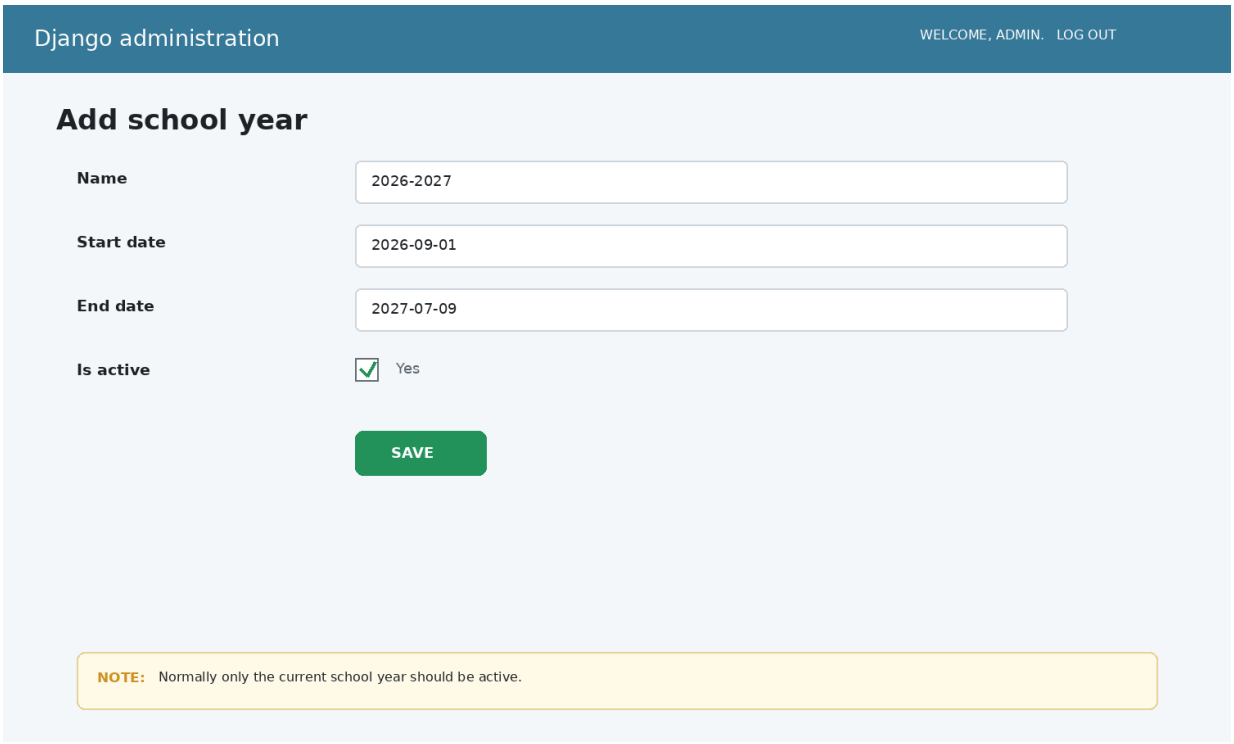

3.1 Create the School Profile

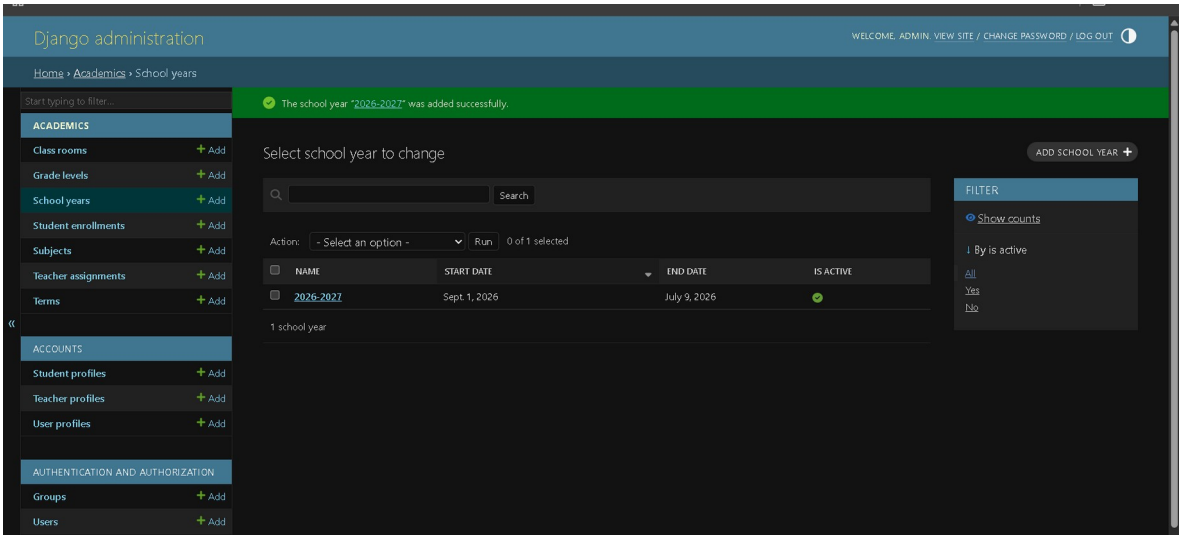

Illustrated example - School Profile form.

1	**Open School profiles** From Academics, select School profiles and choose Add.
2	**Enter school identity** Enter the school name, motto, address, telephone, email and principal name.
3	**Upload the logo** Choose the school logo file in the Logo field.
4	**Save** Save the profile. This information is used on the report card.

3.2 Create the School Year

Illustrated example - 2026-2027 school year.

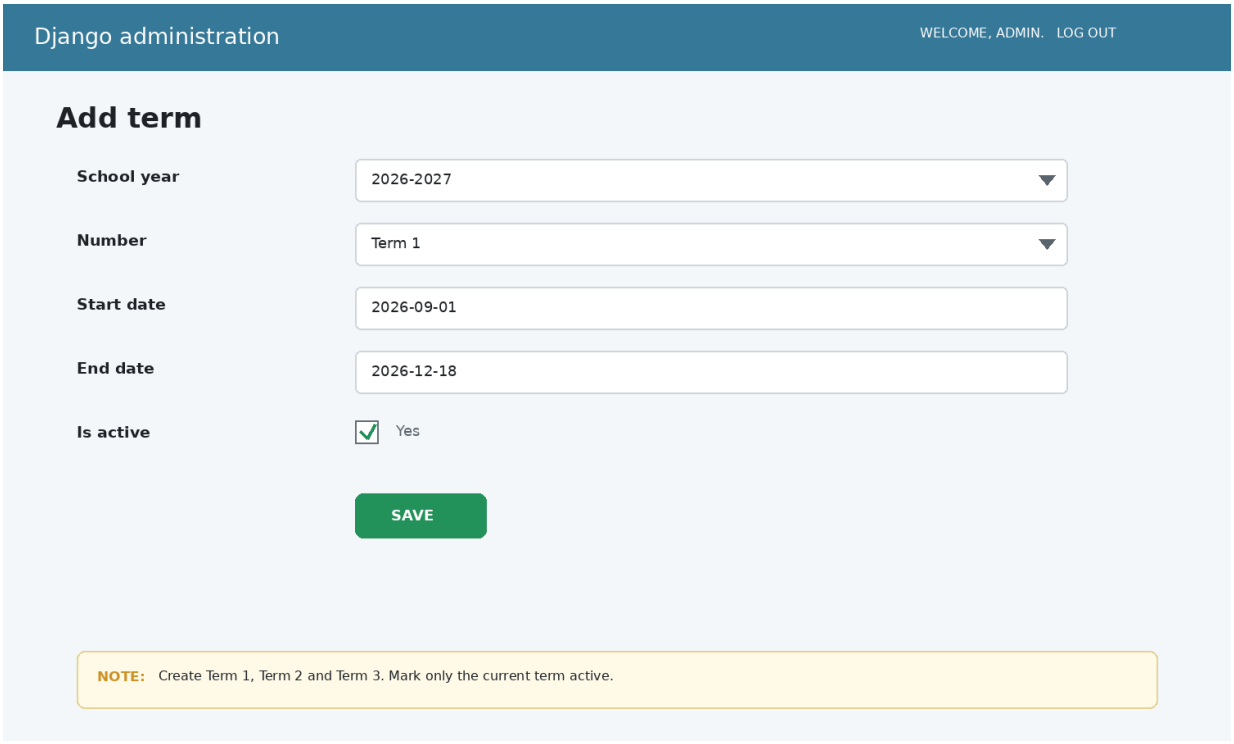

Real portal screenshot - school year record.

1	**Open School years** Select School years -> Add.
2	**Enter the year** Use a clear name such as 2026-2027.
3	**Enter dates** Set the first and last date of the academic year.
4	**Activate**

Check Is active for the current school year, then Save.

Good practice: Avoid having multiple school years marked active unless the portal workflow specifically requires it.

3.3 Create Terms

Illustrated example - Term 1.

1 **Open Terms**
Select Terms -> Add.

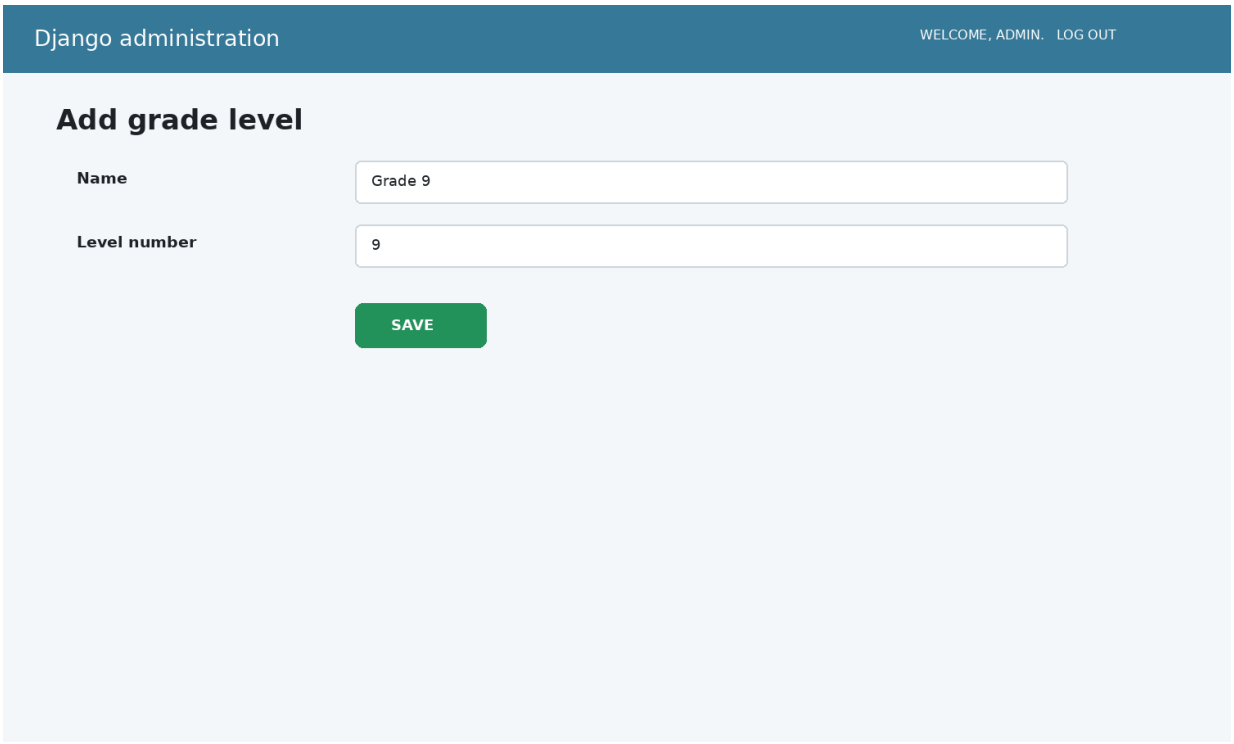

2 **Choose school year**
Select 2026-2027.

3 **Choose term number**
Create Term 1, then repeat for Term 2 and Term 3.

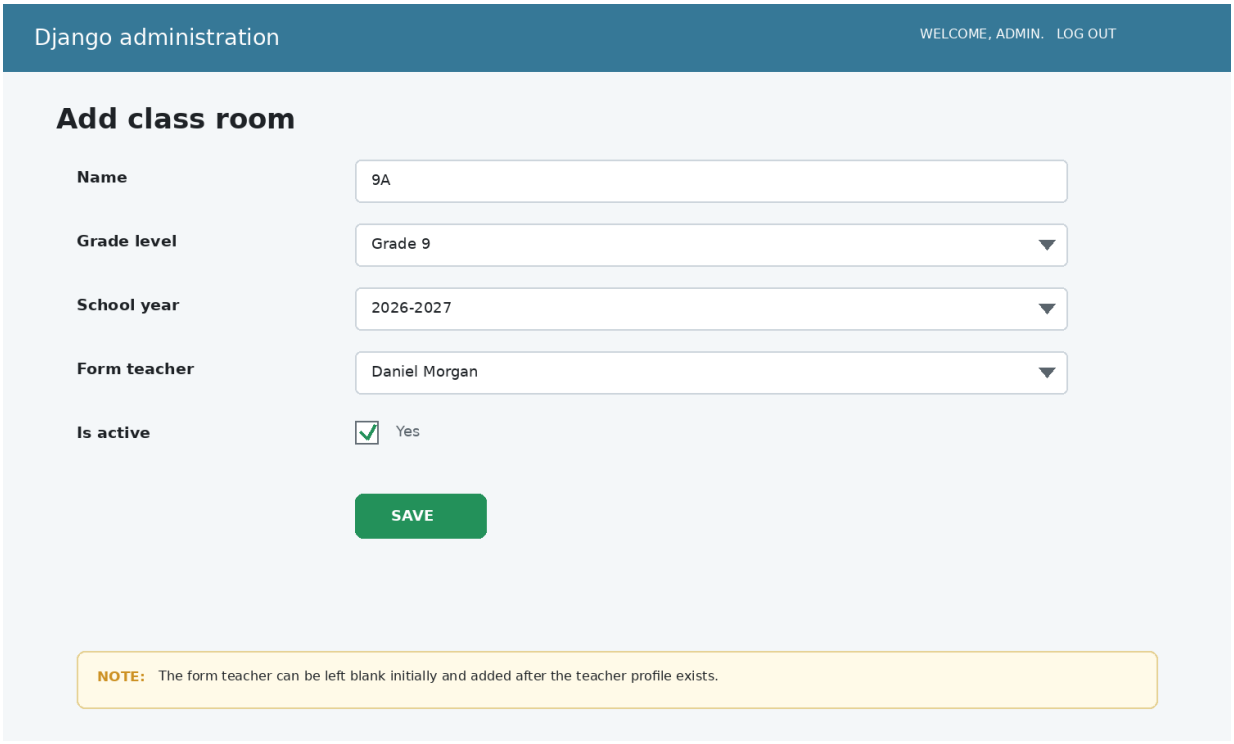

4 **Enter term dates**
Each term's dates should fall within the school year.

5 **Set current term active**
Only the term currently in use should normally be active.

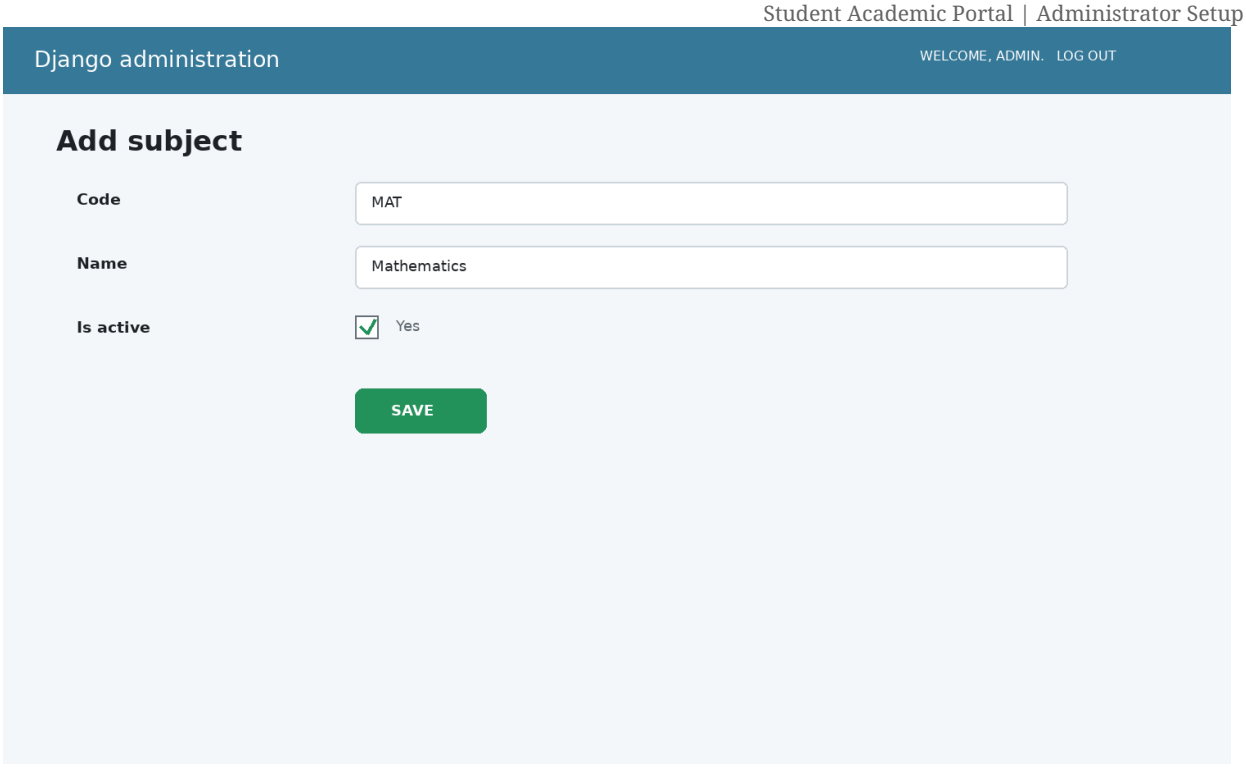

3.4 Create Grade Level, Classroom and Subject

Illustrated example - Grade 9.

Illustrated example - Class 9A.

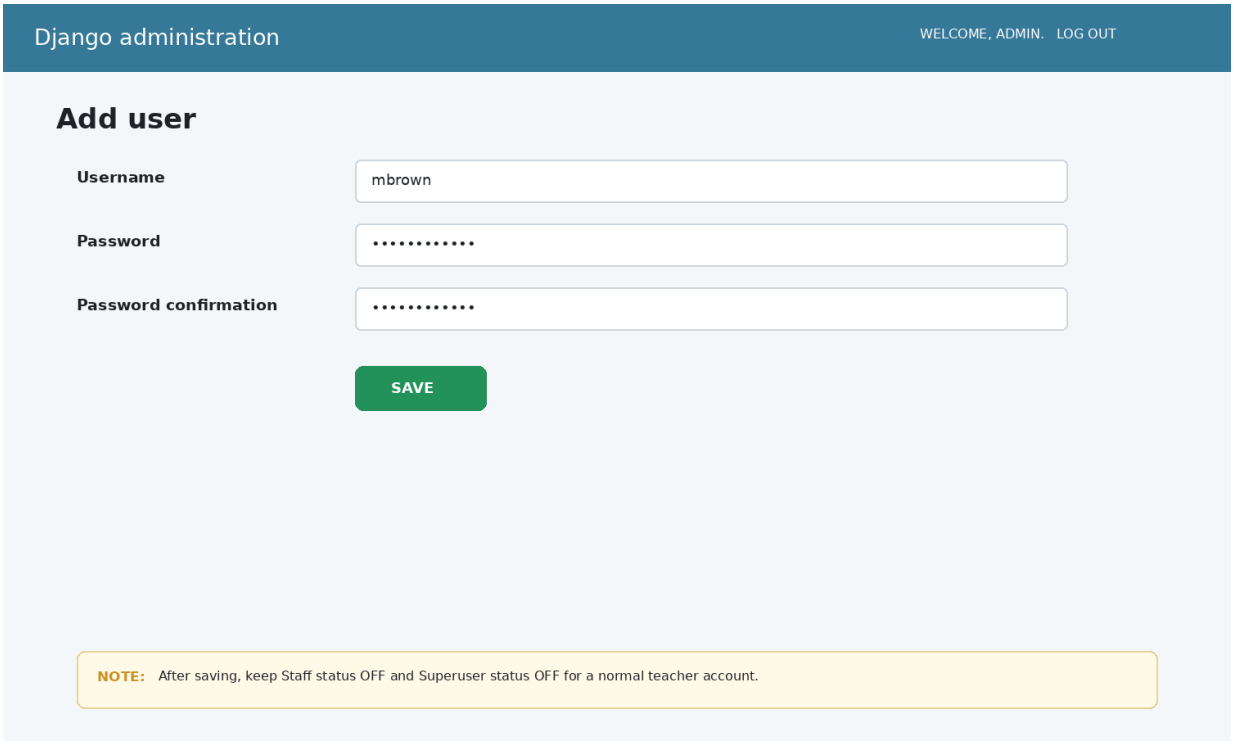

Illustrated example - Mathematics subject.

Setup dependency: Create the Grade Level before the Classroom. The form teacher can be added later if the teacher has not yet been created.

4. Create a Teacher - Complete Process

Example teacher used in this manual: Daniel Morgan, employee number T0002, teaching Mathematics to Class 9A.

4.1 Step A - Create the Django User

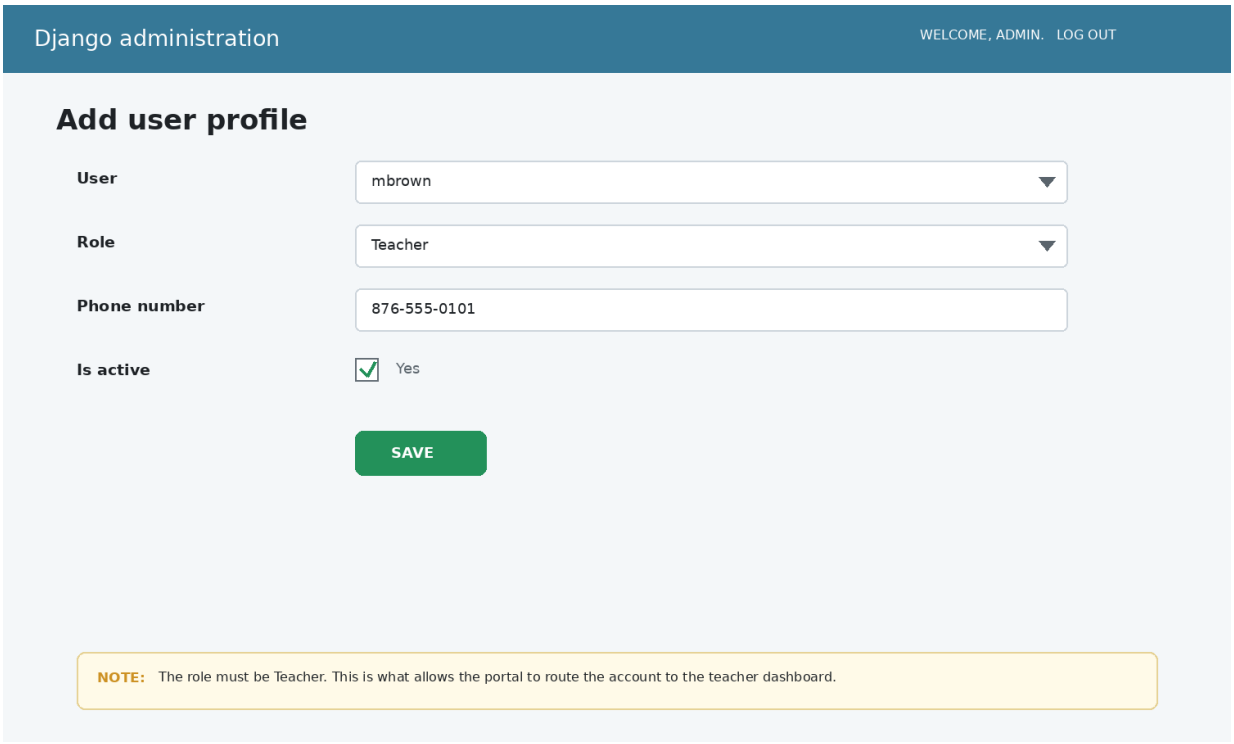

Illustrated example - create the teacher's login account.

1	**Go to Users** Under Authentication and Authorization, choose Users -> Add.
2	**Create username** Enter mbrown or another unique username. For this example use dmorgan if preferred.
3	**Create password** Enter and confirm a temporary password.
4	**Save** After saving, keep Staff status and Superuser status OFF for a normal teacher.

Security: Do not give a normal teacher administrator/staff privileges simply so they can use the teacher portal.

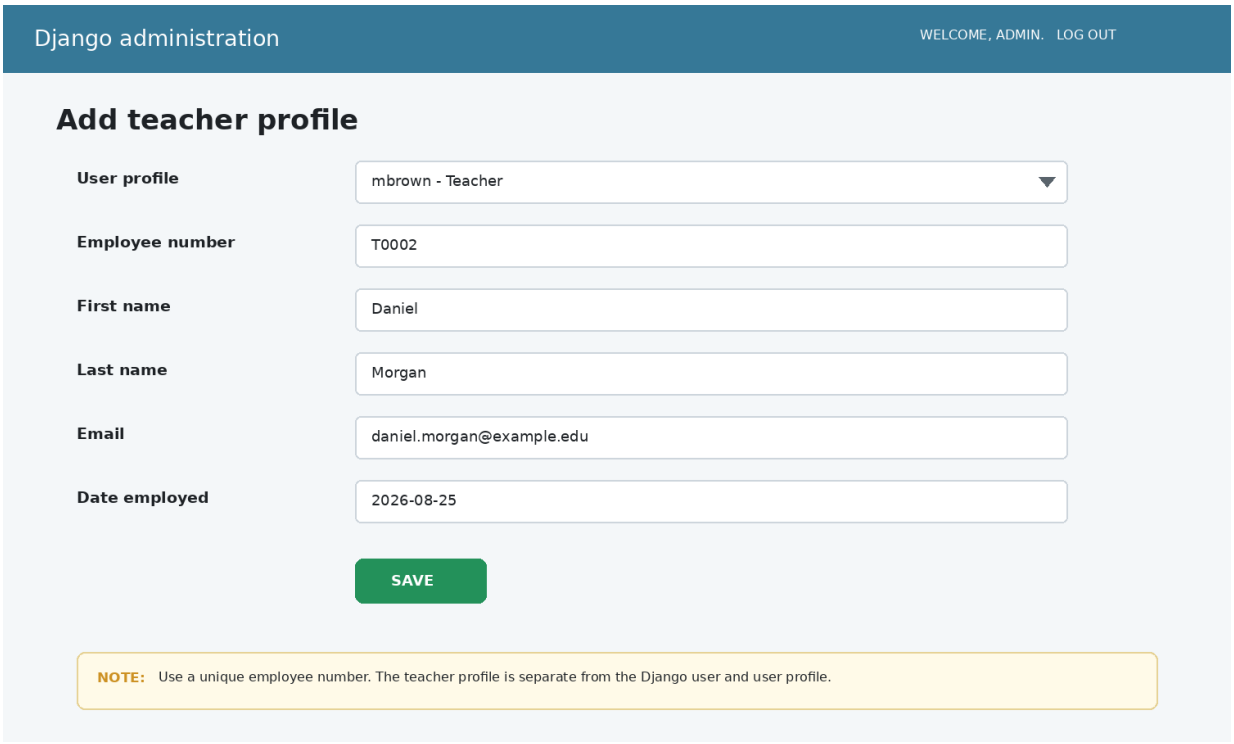

4.2 Step B - Create the Teacher User Profile

Illustrated example - connect the Django user to the Teacher role.

1	**Open User profiles** Under Accounts, choose User profiles -> Add.
2	**Select the Django user** Choose the teacher's username.
3	**Set Role** Select Teacher.
4	**Activate** Ensure Is active is checked and Save.

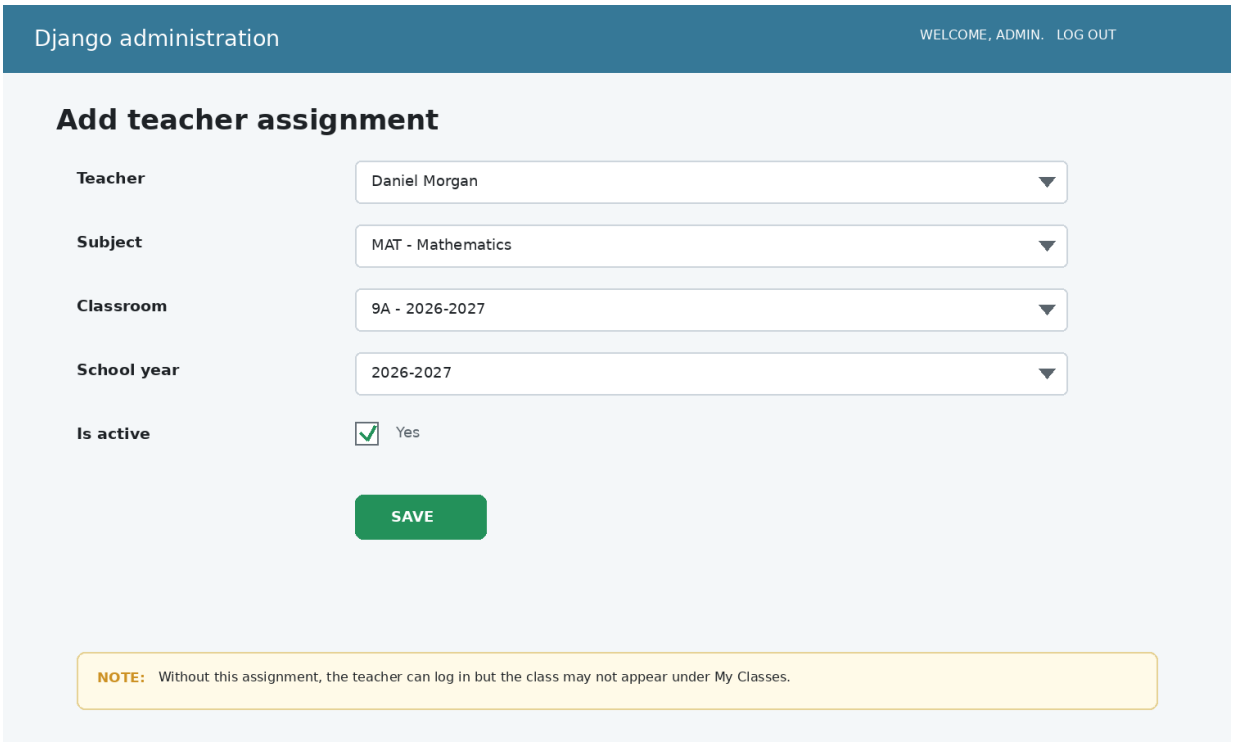

4.3 Step C - Create the Teacher Profile

Illustrated example - teacher identity record.

1	**Open Teacher profiles** Choose Teacher profiles -> Add.
2	**Select user profile** Choose the profile showing the username and Teacher role.
3	**Enter employee details** Add employee number, first name, last name, email and date employed.
4	**Save** The teacher now has a portal identity, but still needs an academic assignment.

4.4 Step D - Assign the Teacher to a Class and Subject

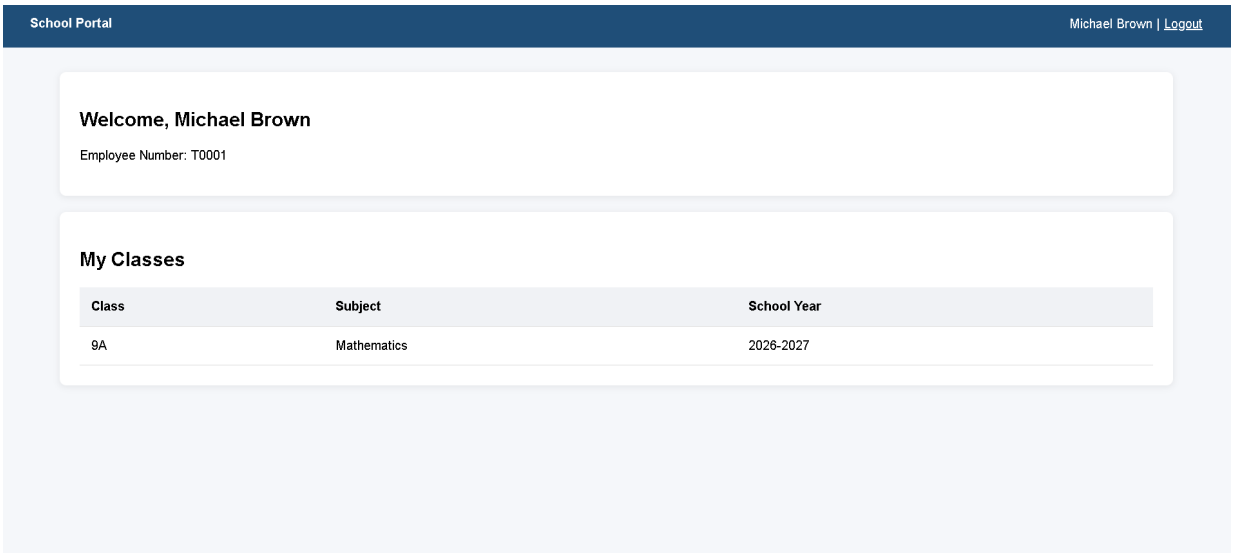

Illustrated example - Daniel Morgan assigned to 9A Mathematics.

1	**Open Teacher assignments** Under Academics, choose Teacher assignments -> Add.
2	**Select teacher** Choose Daniel Morgan.
3	**Select subject** Choose MAT - Mathematics.
4	**Select classroom** Choose 9A - 2026-2027.
5	**Select school year** Choose 2026-2027 and keep Is active checked.
6	**Save** The class should now appear on the teacher dashboard.

If My Classes is empty: The first place to check is Teacher assignments. Confirm teacher, subject, classroom, school year and Is active.

4.5 Test the Teacher Account

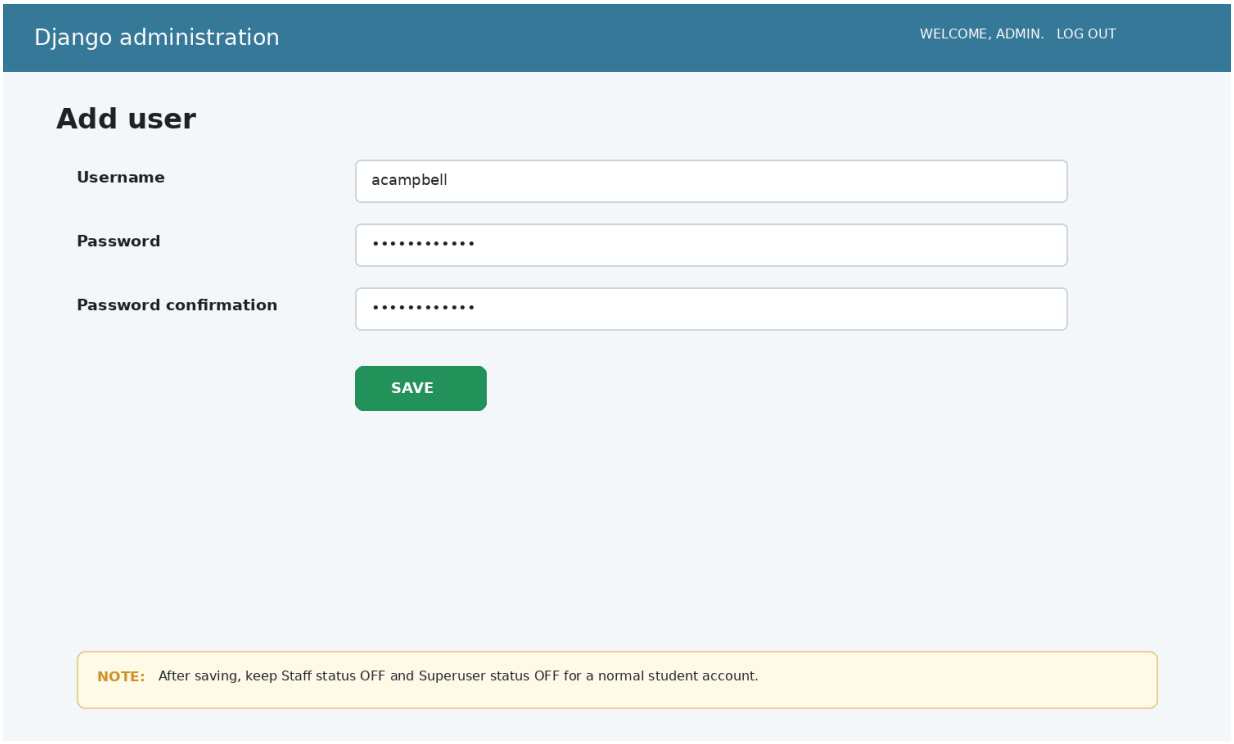

Real portal example - a working teacher dashboard.

1	**Logout of admin** Do not test the teacher while still using the admin session.
2	**Open portal login** Go to http://127.0.0.1:8000/login/.
3	**Sign in as teacher** Use the teacher username and password.
4	**Confirm dashboard** The teacher name, employee number and assigned class/subject should appear.
5	**Open the class** Confirm the class page loads and allows assessment management.

5. Create a Student - Complete Process

Example student used in this manual: Aaliyah Campbell, student number S0002, enrolled in Class 9A for 2026-2027.

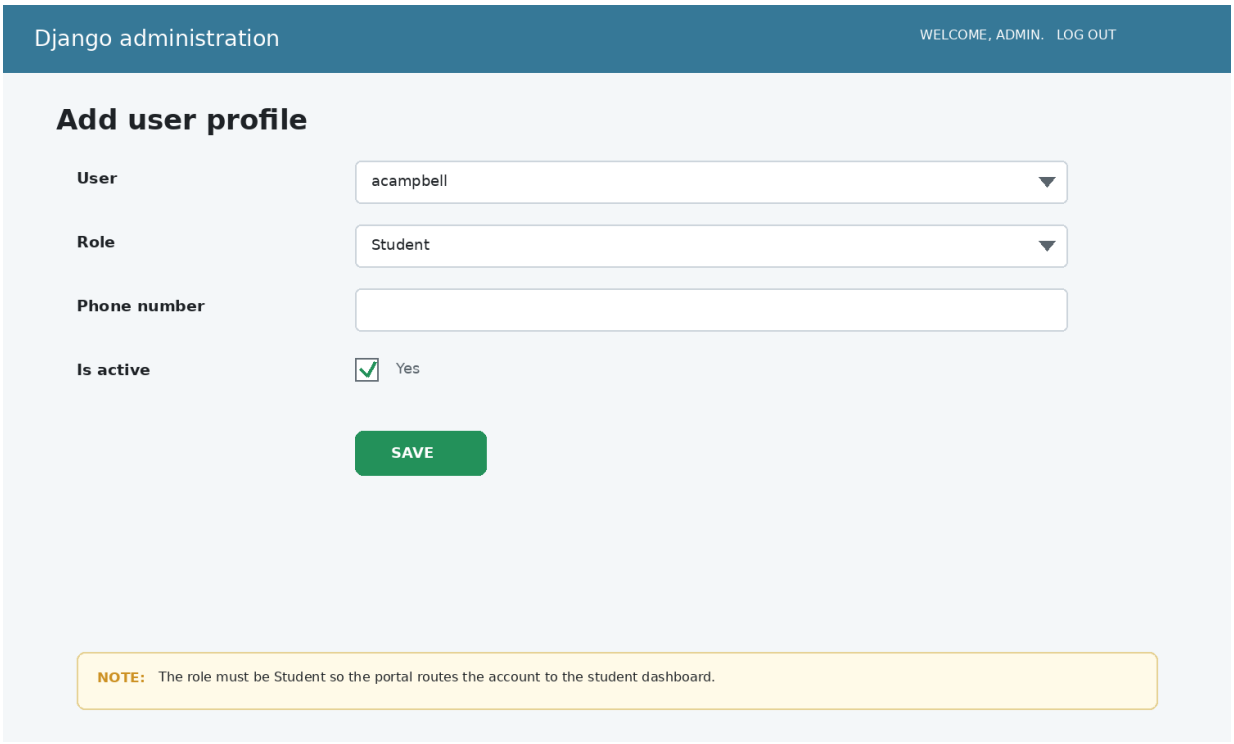

5.1 Step A - Create the Django User

Illustrated example - create Aaliyah's login account.

1	**Go to Users** Under Authentication and Authorization, choose Users -> Add.
2	**Enter username** Use acampbell.
3	**Create password** Enter and confirm a temporary password.
4	**Save** Keep Staff status and Superuser status OFF for a student.

5.2 Step B - Create the Student User Profile

Illustrated example - connect acampbell to the Student role.

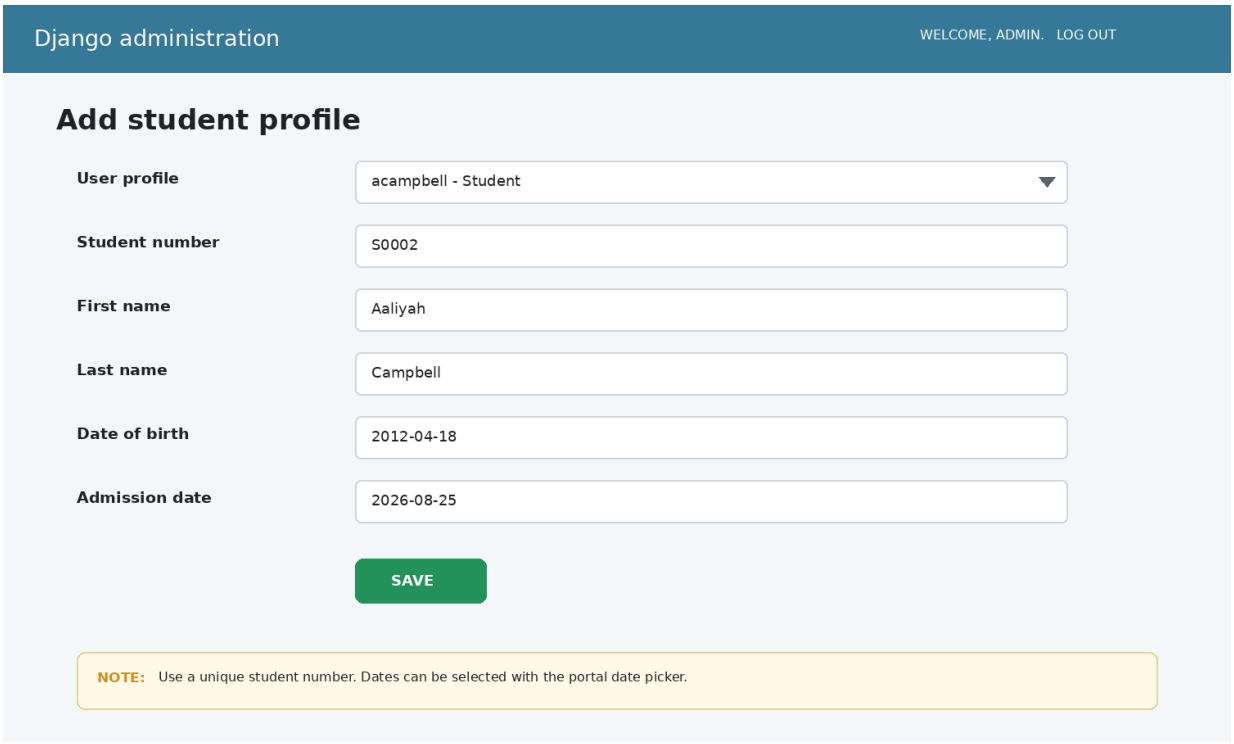

1 **Open User profiles**
Under Accounts, choose User profiles -> Add.

2 **Select acampbell**
Choose the Django user created in the previous step.

3 **Set Role**
Select Student.

4 **Activate and Save**
Ensure Is active is checked.

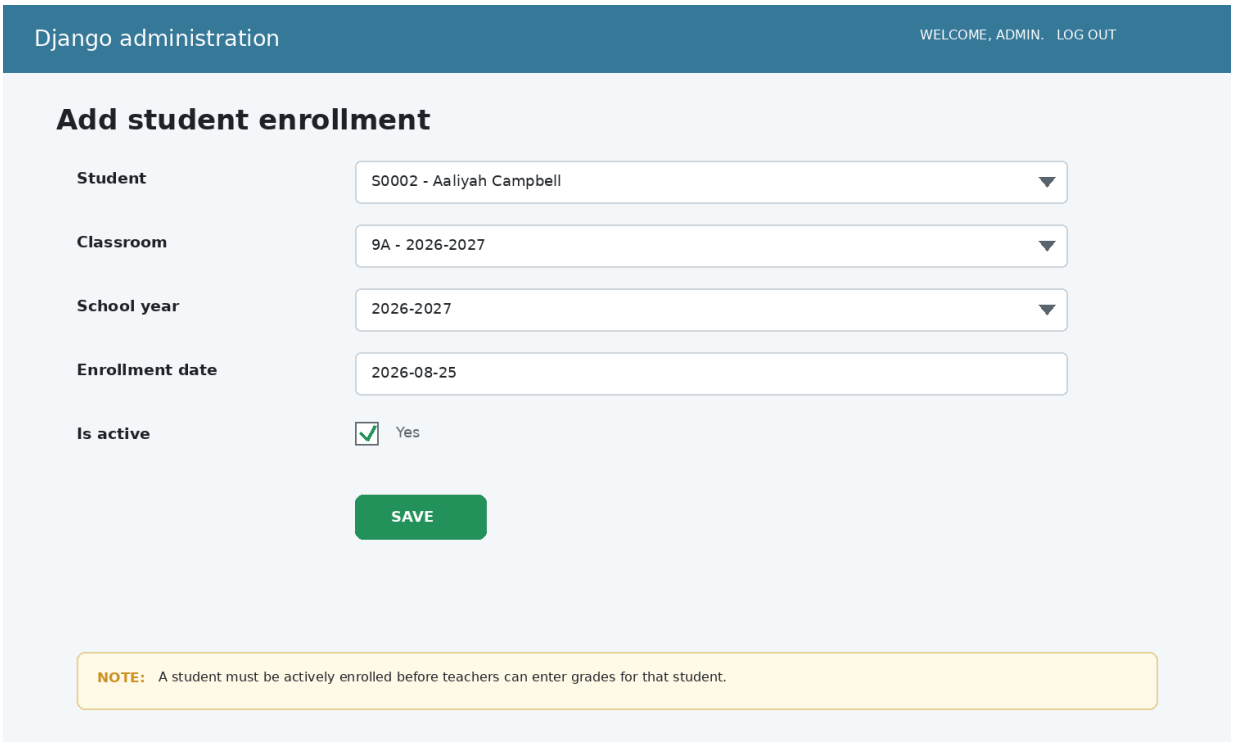

5.3 Step C - Create the Student Profile

Illustrated example - Aaliyah Campbell student profile.

1	**Open Student profiles** Choose Student profiles -> Add.
2	**Select user profile** Choose acampbell - Student.
3	**Enter student number** Use S0002. Every student number must be unique.
4	**Enter personal details** Add first name, last name, date of birth and admission date.
5	**Save** The student now exists in Accounts but still needs an enrollment.

5.4 Step D - Enroll the Student

Illustrated example - enroll Aaliyah in 9A.

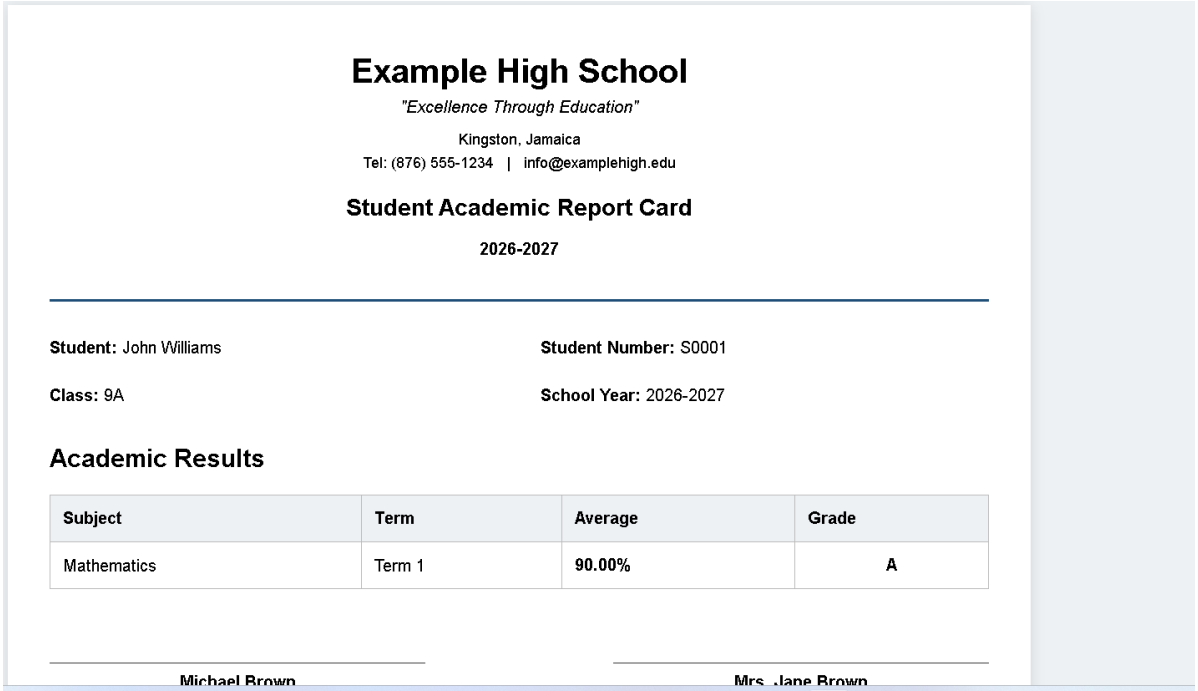

1	**Open Student enrollments** Under Academics, choose Student enrollments -> Add.
2	**Select student** Choose S0002 - Aaliyah Campbell.
3	**Select classroom** Choose 9A - 2026-2027.
4	**Select school year** Choose 2026-2027.
5	**Enter enrollment date** Use the student's actual enrollment/admission date as appropriate.
6	**Activate and Save** Keep Is active checked.

Why enrollment matters: Without an active Student Enrollment, the student may not appear on the teacher's grade-entry list and may not have the correct class/report data.

5.5 End-to-End Student Test

1	**Login as the teacher**

	Open 9A Mathematics and confirm Aaliyah appears in the class/grade-entry list.
2	**Create an assessment** Example: Mathematics Fractions Test, maximum 50, weight 20.
3	**Enter a grade** Example: Aaliyah receives 43/50 = 86%.
4	**Publish** Publish the assessment so it becomes visible to the student.
5	**Logout teacher** Return to the portal login page.
6	**Login as Aaliyah** Use acampbell and the student password.
7	**Check dashboard** Confirm published Mathematics results and term summary appear.
8	**Open report card** Confirm Aaliyah's name, S0002, Class 9A, school year and academic result.
9	**Print** Use Print Report Card and verify browser print preview.

Example High School

"Excellence Through Education"

Kingston, Jamaica
Tel: (876) 555-1234 | info@examplehigh.edu

Student Academic Report Card

2026-2027

Student: John Williams

Student Number: S0001

Class: 9A

School Year: 2026-2027

Academic Results

Subject	Term	Average	Grade
Mathematics	Term 1	**90.00%**	**A**

Michael Brown

Mrs. Jane Brown

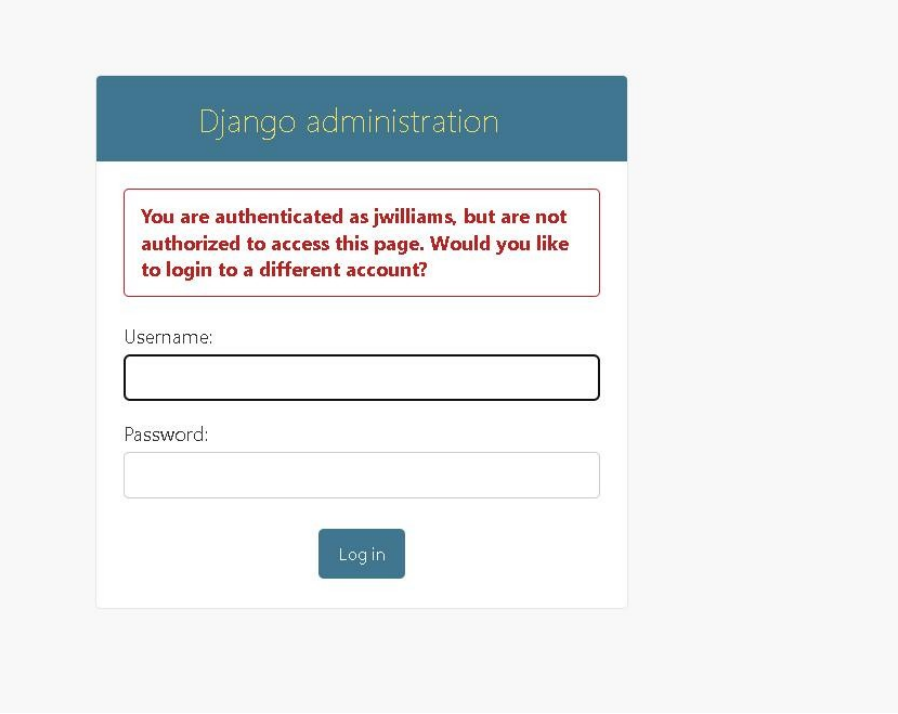

Real portal example - report-card layout. The new student should receive the same layout with her own data.

6. Creating an Administrator Account

Administrator access is different from teacher/student portal access. An administrator must be allowed to access Django administration.

1	**Create or select a Django User** Go to Authentication and Authorization -> Users.
2	**Enable Staff status** Staff status is required for access to /admin/.
3	**Choose permissions** For a full system administrator, a superuser account can be used. For restricted admin staff, grant only the permissions they need.
4	**Create User Profile if used by portal** Set the portal role to Administrator where appropriate.
5	**Test /admin/** Logout and confirm the administrator can sign in at /admin/.

Least privilege: Do not make teachers or students staff/superusers. Give administrator permissions only to authorized personnel.

Real example - a non-admin account is denied access to Django administration.

7. Common Administrator Problems

Problem	Check first	Fix
Teacher logs in but sees no class	Teacher Assignment	Assign the correct teacher, subject, classroom and active school year.
Student does not appear for grading	Student Enrollment	Confirm student is enrolled in the same classroom/school year and Is active.
Student login opens wrong area	User Profile role	Set role to Student.
Teacher login opens wrong area	User Profile role	Set role to Teacher.
Student cannot see a grade	Assessment publish status	Teacher must publish the assessment.
Report card has wrong school heading	School Profile	Update school name, contact details, principal and logo.
Admin cannot access /admin/	Django User permissions	Enable Staff status for an authorized admin account.
Duplicate student/employee number error	Existing profile	Use a unique student number or employee number.
Wrong class/year on report	Enrollment	Correct the active Student Enrollment.

8. Administrator Checklists

New Teacher Checklist

☐ Django User created

☐ User Profile role = Teacher

☐ Teacher Profile created

☐ Unique employee number entered

☐ Teacher Assignment created

☐ Correct subject/class/year selected

☐ Is active checked

☐ Teacher login tested

☐ My Classes verified

New Student Checklist

☐ Django User created

☐ User Profile role = Student

☐ Student Profile created

☐ Unique student number entered

☐ Student Enrollment created

☐ Correct classroom/year selected

☐ Is active checked

☐ Student appears for teacher grading

☐ Student login tested

☐ Published grade visible

☐ Report card tested

New School Year Checklist

☐ School year created and activated

☐ Three terms created

☐ Current term activated

☐ Classrooms created for new year

☐ Student enrollments updated

☐ Teacher assignments updated

☐ School profile checked

☐ Teacher and student test accounts verified

Final rule: Always test a new teacher and a new student after setup. A successful login alone is not enough - verify the academic connections and report card.

END OF ADMINISTRATOR MANUAL
